

# BroStatus – Installation at a Glance

Version 1.0.0 · As of 4 Nov 2026 · Everything else is in the full guide (BroStatus-Anleitung).

## What you need

- Claude Code (tested with 2.1.310) – in the terminal (Windows, Mac, Linux), in the desktop app under “Code” or in VS Code with the Claude Code extension (tested on Windows). Not in the regular Claude chat and not in other AI tools.
- Python 3.8 or newer. On Windows the installer installs it by itself if it is missing.
- The installer file for your system: `BroStatus-Install.exe` (Windows), `BroStatus-Mac.zip` (Mac) or `brostatus-install.sh` (Linux)

## Windows

1. Double-click `BroStatus-Install.exe`.
2. If “Windows protected your PC” appears: **More info** → **Run anyway**.
3. If Python is missing, it is installed through winget, if available (1–2 minutes); otherwise you get a hint.
4. When asked for the folder: just press **Enter**.
5. At “✓ Fertig!” (German for “Done”) press any key.

If Windows blocks the .exe, use `BroStatus-Install.cmd`; it does the same.

## Mac

1. Unpack `BroStatus-Mac.zip` with a double-click.
2. The first time, **right-click** `BroStatus-Install.app` → **Open** → **Open**.
3. No Open button? **System Settings** → **Privacy & Security** → **Open Anyway**.
4. If Python is missing, run this in the Terminal and repeat step 2:

```
xcode-select --install
```

5. At “✓ Fertig!” (German for “Done”) press Enter.
6. Mac: so far only tried by one person in the terminal.

## Linux

1. In the folder with the file, start it in the terminal:

```
bash brostatus-install.sh
```

2. If Python is missing, install it first and repeat step 1:

```
sudo apt install -y python3
```

3. Linux has not been tested in real use yet, feedback is welcome.

## Start and check

1. **Restart** Claude Code (desktop app: new session, terminal: reopen `claude`).
2. In the terminal, the diamond appears at the bottom with “○ bereit” (German at first, switch under `/bro` → More → Language), context, cache, active and files.
3. In the desktop app, the “BroStatus” panel opens on the right by itself with the first message. Otherwise type `/bro`, then **Esc** and **Enter** (Esc closes the suggestion menu).
4. Under “More” in the panel you set the language: Deutsch, English, Español, Italiano or Français.

## Update

Start the new installer file the same way as the first time. It replaces the old version, your settings are kept. You do not have to uninstall first.

## Remove

Windows (PowerShell):

```
python $HOME\.claude\brostatus\install.py --uninstall
```

Mac and Linux:

```
python3 ~/.claude/brostatus/install.py --uninstall
```

**Local:** BroStatus runs on your computer, with no servers of its own. Telegram is only on if you set it up yourself. BroStatus itself sends no requests through your account. On Windows the installer downloads Python through winget if needed and accepts its terms for you. Before any change to Claude Code’s settings, the installer makes a backup.
